Create a Product Model in Blender

Blender Software · https://djcs.art/docs/create-a-product-model-in-blender/

This is not an official description of Blender, but a description of the features of Blender as they are used in our business.

The model can be an existing model say a typical wine glass or a model that has been created from scratch. If there is a model that can be purchased or downloaded for free it could be faster than creating one from scratch.

The goal is to create product 3D videos.
